(54) Title: COMPOSITIONS AND METHODS FOR REGULATING AN IMMUNE RESPONSE IN A SUBJECT

(57) Abstract: The present invention relates to compositions and methods for regulating an immune response in a subject, particularly to treat a subject with a tumor, notably a solid tumor, or an infectious disease.. Disclosed are methods of regulating the innate immunity in a subject, such as by regulating the activity of $\gamma\delta$ T cells in a subject. Disclosed are combinations of particular agents, such as a cytokine and a $\gamma\delta$ T cell activator, particular administration regimens and dosages can produce a remarkable expansion of $\gamma\delta$ T cells in vivo and a remarkable increase in a subject's immune defense. The invention can be used for therapeutic purposes, to produce, regulate or facilitate an immune response in a subject.
